agri environment schemes aes is frequently adopted for tricky environmental issues one key concern for aes design is to optimize the cost effectiveness for issues of cost effective prevention of agricultural soil erosion and non point source water pollution although models that assess both environmental effects and economic costs of land use measures have been developed they typically adopt a planning perspective instead of designing aes with the role of farmers being considered this book presents a spatially explicit novel integrated modelling approach that addresses the shortcoming by combining several components the relevance of the modelling approach is demonstrated in this book by applying it to the baishahe watershed in shanxi province in china the results show that the modelling approach is robust to design cost effective aes i e under given budget the maximum environmental effect in the study region could be attained with a set of designed payments for measures in aes the developed modelling approach is generic and powerful for application in all kinds of agricultural watersheds with various sizes

in this monograph the authors demonstrate how the integration of adaptability operability and re configurability in the design of complex systems is indispensable for the further digitization of engineering systems in smart manufacturing globalization of the customer base has resulted in distributed and networked manufacturing systems however current design methods are not suitable to address variations in product design changes in production scale or variations in product quality necessitated by dynamic changes in the market adaptability operability and re configurability are key characteristics that are necessary to address the limitations of the current methods used to design

networked manufacturing systems in recent years the digital transformation driving industry 4 0 has had an enormous impact on globally distributed manufacturing digitalisation the integration of digital technology into networked engineered systems is increasingly being adopted to respond to changes in the market this is achieved by means of a the concurrent design of adaptable systems b addressing flexibility in design parameters c conducting an operability analysis and d employing a reconfiguration strategy to address faults and variances in product quality and re establish connectivity among the elements in the system the design of manufacturing systems in the age of industry 4 0 is addressed in this monograph the authors introduce the concept of a smart platform and a computational framework for the digitalization of networked manufacturing systems they also suggest how the framework and techniques in this monograph are applicable beyond the manufacturing domain for architecting networked engineered systems in other industries such as chemical processes and health care that are being transformed through the adoption of the industry 4 0 construct
