

February 25, 2013

The Honorable Senator Ron Wyden
221 Dirksen Senate Office Building
Washington, DC 20510

Via Fax: (202) 2282717

To the Honorable Senator Ron Wyden:

On behalf of these twelve national and regional library, publishing, research and advocacy organizations, we write to thank you for introducing, “The Fair Access to Science and Technology Research Act” (FASTR). This bill will provide an important mechanism to ensure that manuscripts of peer-reviewed scientific articles reporting on research funded by the U.S. Government can be freely accessed and fully used by all American taxpayers – including researchers, teachers, students and businesses.

Timely, barrier-free access to the results of federally funded research is an essential component of our collective investment in science. We fully agree that this information should be shared in cost-effective ways that take advantage of newly available technologies – especially computational technologies such as text and data mining. The increased sharing and use of this information will help to advance the pace of discovery, as well as to speed the translation of this knowledge into innovative new services and products – fueling economic growth, and helping to create jobs.

The establishment of interoperable, open digital repositories containing publicly funded research will create an unprecedented, valuable new resource for researchers – and all interested members of the public – to tap into. It will allow this critical layer of information to be linked, for the first time, to the wealth of other publicly accessible databases at federal agencies. For the first time, maximum use of this research will be fully realized – opening the door for previously unobtainable connections and discoveries to be made.

The bill creates opportunities for unprecedented access and use of research while at the same time providing important safeguards to protect the interests of those who contribute to the validity and quality of research results. Specifically, the inclusion of an embargo period provides an initial, exclusive distribution option for traditional publishers who may wish to maintain a subscription model for access.

The requirement for deposit of the author’s final manuscript, rather than the final published article, allows publishers the opportunity to continue to market a product that contains value-added enhancements beyond what is available in the public repositories. And finally, the flexibility for each agency to determine its own strategy for establishing a digital repository reflects an understanding that a location that works for one agency might not be appropriate for another.

FASTR reflects the growing worldwide trend of funding agencies and higher education institutions actively working to maximize access to and sharing of research results, recognizing that increasing usage will help deliver an accelerated return on their investment in research. Harvard University, the Massachusetts Institute of Technology, Stanford University, Oberlin College, and the University of Kansas are but a few of the growing number of campuses that are adopting policies to retain their institutional research outputs through the deposit of research manuscripts in a digital repository.

The bill advances the progress made by the public access policy of the National Institutes of Health (NIH), the first U.S. agency to require public access to taxpayer-funded research. Since its implementation, the NIH policy has resulted in an average of 90,000 new biomedical manuscripts being made publicly available each year. Demand for this information is extremely high, with more than 700,000 unique users accessing material from this repository each weekday. Under FASTR, research results related to issues of equally critical importance – from climate change to renewable energy – will be just as readily accessible to the public.

The Fair Access to Science and Technology Research Act will help broaden access to important research that is now unavailable to the public at a time when the demand for wider access – especially to federally funded research – is reaching a critical high. As libraries, scientists, researchers and publishers, we firmly believe that this legislation will result in the acceleration of scientific progress, and lead to important benefits to the U.S. economy – including the creation of new jobs in a broad range of sectors that depend on access to scientific research to innovate.

We thank you again for your leadership in introducing the Fair Access to Science and Technology Research Act, and for your long-standing commitment to the success of crucial public access policies, and look forward to working with you to see that this important legislation is passed into law.

Sincerely,
