why is american politics so intense and emotionally competitive today and how did we get here in the fundamental voter john h aldrich suhyen bae and bailey k sanders explain why the notion that we are divided into tribal loyalties is at best only partially correct and discuss how the divisions rest on much more substantive politics than they once did in the 1950s and 1960s the american public based voting primarily on partisan loyalties landslide presidential elections were once common but over the last forty years they have converged to very closely contested elections congressional elections were increasingly incumbent centered before 1984 and decreasingly so afterward these changes reflect the changing nature of fundamental forces that shape the public s electoral opinions and voting behavior from a single such fundamental partisan identification the electorate now rests on five fundamental forces party ideology issues race and economics since the 1980s these fundamentals have grown increasingly important and increasingly aligned such that voters are now sorted into two increasingly bitterly divided sides believing that the other side is on the wrong side of nearly everything of political relevance voters like officials have come to deeply dislike the opposition a state of affairs that threatens to undermine the stability of democratic institutions in the united states

this paper analyzes the behavior of gross capital inflows across 34 emerging markets ems we first confirm that aggregate inflows to ems co move considerably we then report three findings i the aggregate co movement conceals significant heterogeneity across asset types as only bank related and portfolio bond and equity inflows do co move ii while global push factors in advanced economies mostly explain the common dynamics their relative importance varies by type of flow and iii the sensitivity to common dynamics varies significantly across borrower countries with market structure characteristics especially the composition of the foreign investor base and the level of liquidity rather than borrower country s institutional fundamentals strongly affecting sensitivities countries relying more on international funds and global banks are found to be more sensitive to push factors our findings suggest that ems need to closely monitor their lenders and investors to assess their inflow exposures to global push factors
